

DB LUG 1m00 (set)

Dutch Barrier's Line Up Gate (LUG) system features a unique interlocking design, significantly reducing setup time for entry systems such as main entrances or golden circle entries. A single standard Dutch Barrier bolt securely interlocks one LUG to the next. An additional connector set (shown on the left) enables tight chute configurations for controlled ingress and egress.

- a state of the art aluminium barrier system, built for fast setup and optimised crowd control solutions -

About

Dutch Barrier's founders and partners boast over 50 years of experience in high-end manufacturing, layout design, and crowd control solutions. We saw an opportunity to start afresh with an entirely new stage barrier design, preserving the best features and improving upon them where possible.

Why

We believe in quality, safety, and creating an unforgettable experience. The safer an audience is, the more comfortable it will feel at your event.

How

We achieve quality and safety by leveraging 50-plus years of combined original creators' experience to reinvent the to date world's best barrier system from the ground up, making it accessible to anyone who might be in the market for such a system, either to rent or to buy.

What

Dutch Barrier® is a state-of-the-art lightweight aluminium barrier system offering an innovative combination of straights, special sections and storage solutions. Create ingenious crowd control solutions, enjoy quick setups and enhanced handling, and benefit from an equal footprint for every dolly during transport or storage.

Oh, and there's one more thing...

Dutch Barrier® is not just a brand. It's a state-of-the-art engineering company where customer support is an integral part of the mission rather than being hidden behind the impersonality of an online promise.

DB LUG 1m00 (set)

top view

Once assembled, line-up gates create 0m50 wide walkways, separated by bumper units. A standard set comprises three bumpers, two half bumpers to serve as end caps and four treadplates, forming four consecutive walkways. Inside the bumpers, staff can for example safely perform tasks like ticket-checking. An extension set of four bumpers and treadplates is also available.
